

Feminism is for everybody, especially educators!

1 Introduction

Email subject: [FIFE] 🖐️ Welcome to Feminism is for everybody, especially educators

Hello and welcome [Subscriber],

This is the “Feminism Is For Everybody, Especially Educators!” course. That’s quite a mouthful, so we’ll be referring to this as ‘FIFE’ from here on in. This course is an introduction into the philosophy of feminist pedagogy and is written for fellow educators who want to spice up their work with some feminist backgrounds.

This is the first of 8 emails that you are going to receive. If someone has forwarded this to you, then consider signing up for yourself **here**.

Let’s start with a little side note about feminism to immediately bust some myths:

We understand feminism as a socio-political movement that aims to define and establish the political, economic, personal, and social equality of the sexes (c.f. [Wikipedia](#)) but we also believe in [intersectional feminism](#) that describes that women and LGBTIQA* are oppressed by gender as well as by race, class and other factors that marginalise groups of people.

Feminism is not about hating men or trying to discredit all men. It is rather about actively trying to destroy a system of oppression that benefits predominantly white [cisgender](#) males: that system is referred to as “the patriarchy”. The brilliant bell hooks, who also inspired the name of this course, said it best:

“Come closer. See how feminism can touch and change your life and all our lives. Come closer and know firsthand what feminist movement is all about. Come closer and you will see: feminism is for everybody.” - [bell hooks](#)

What is feminist pedagogy?

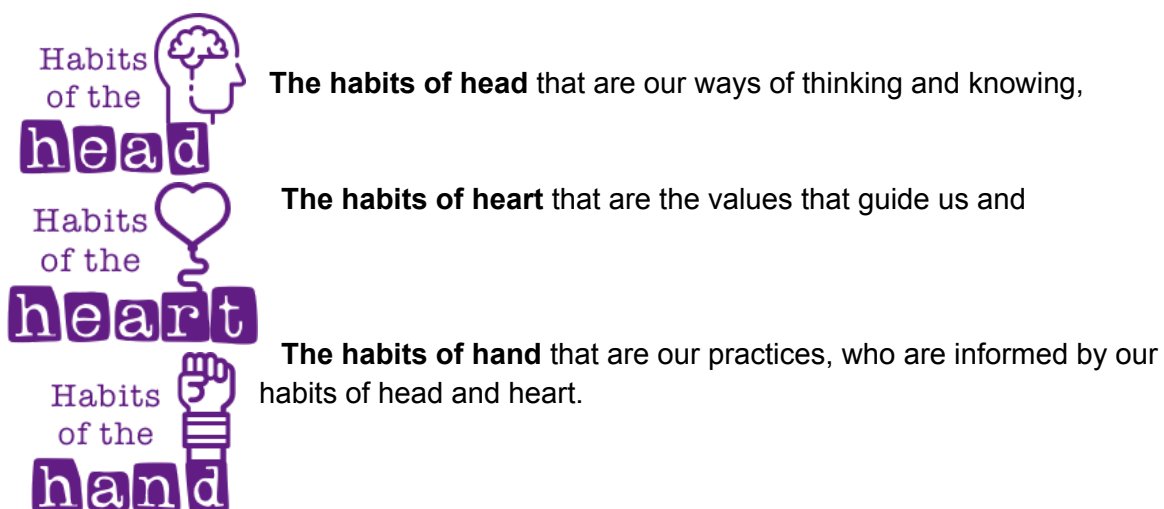

Feminist pedagogy is an educational philosophy that integrates feminist research and beliefs into pedagogical practice. It is reframing the questions of “**Why do we teach? Why do students learn? What are the goals of learning?**” from a feminist perspective because our motives and beliefs have significant consequences on teaching and learning.

After completing this course you will have a basic understanding what feminist pedagogy is and how to approach a “feminist classroom”. And by “classroom” we mean every learning environment you can think of, even a YouTube video or a Podcast. This course will brush a broad stroke through different settings of teaching.

The base and inspiration for this course came from “[A Guide to Feminist Pedagogy](#)” by the [Vanderbilt Center for Teaching](#). This is an *introductory* course so I’ll be signposting you to places where you can find out more when you’re ready to take your journey further!

Signature Pedagogies

This course as well as the [Guide](#) are divided into three “chapters” inspired by the theory of [signature pedagogies from Lee S. Shulman](#). Signature pedagogies are “characteristic forms of teaching and learning” (Shulman 2005) in the professions.

If we expand this context to learners in a variety of settings we see that it fits multiple learning environments. The way we teach and educate always shapes and

influences values and habits of the people that we meet. In the best case they take these new values with them to teach or influence others.

Deep Dive

At the end of every email we are going to offer some links for more resources about education and feminism to help you expand your knowledge from this course.

▶ [We should all be feminists | Chimamanda Ngozi Adichie | TEDxEuston](#) (30:15 min) Is a wonderful spoken essay why feminism is important in all parts of this world and among all people.

▶ [Anita Sarkeesian: 'How to be a feminist' \(All About Women 2015\)](#) (5:37 min) Is a short presentation by feminist media critic Anita Sarkeesian who explains how she realized that her work was feminist and how we can all be more feminist.

[A list of books](#) that we recommend for a deep dive into feminism but also education. Some are not available in English but we think they belong there as well. Feel free to send us your recommendations too, we would love to expand this list!

2 Habits of head

Email subject: [2 FIFE] 📖 Habits of head: Philosophy

Hello again [subscriber],

Welcome to the second email of the 'FIFE' course from We Are Open Co-op. If you've had this email forwarded to you from a friend or colleague, you can sign up for yourself **here**.

In the first email we looked at the things you can expect in this course, defined what feminist pedagogy means and got introduced to the idea of signature pedagogies.

Rooted in philosophy

To understand further where all of this is coming from we have to set some grounds in the philosophies that nurture the theory and practice. Many different philosophers had ideas about epistemology, the theory of knowledge. Many feminists root their theories on those thoughts which make it important to understand some of them but also have a look at the feminist twist.

“The main interest of feminist philosophers is how gender stereotypes situate knowing subjects.” ([Wikipedia](#)) This means that it acknowledges the inherent connection between power and knowledge and the role of gender in knowledge production (e.g. Grasswick 2018)

According to Belenky et al. we have to ask ourselves the following questions to reflect on the nature of truth and reality:

- “What is truth?
- What is authority?
- To whom do I listen?
- What counts for me as evidence?
- How do I know what I know?” (Belenky et al. 1986 p.3)

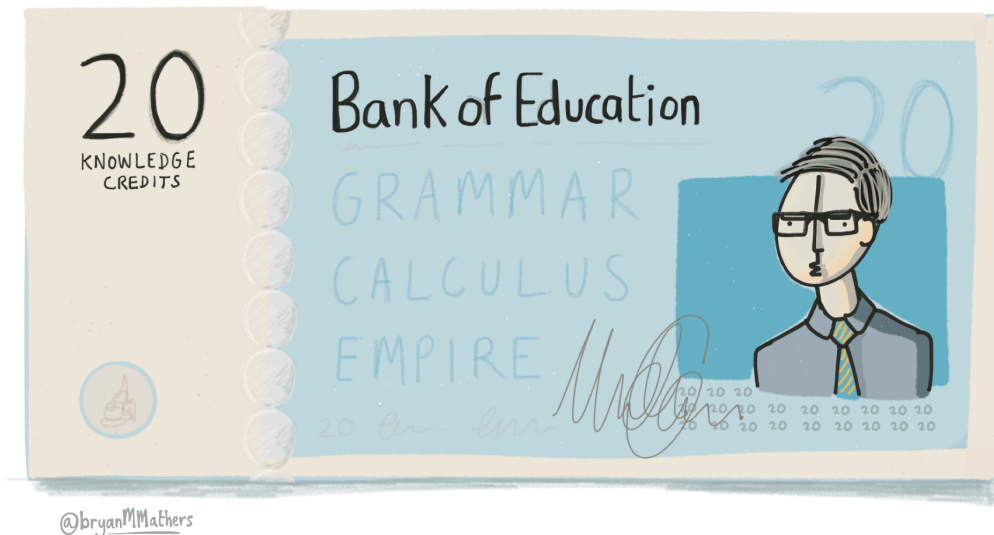

Because answering and reflecting these questions has an influence on:

- The “way we interact with others,
- Our public and private personae,
- Our sense of control over life events,
- Our views of teaching and learning,
- And our conceptions of morality” (Belenky et al. 1986 p.3)

Construction of Knowledge

Who defines **knowledge**...

Thought: Paulo Freire

...and gives it a **value**?

To understand the construction knowledge from a feminist perspective we have to look at social constructivism. Social constructivism is the idea that knowledge is socially produced and not as many believe the product of individual mental faculties. (c.f. Barkley, Cross, and Major). Paulo Freire describes this product of individuals as the “banking concept of education” and that teaching is an act of depositing, and students are empty, passive vessels that receive static information. (Freire, p.72)

One of my teachers in university showed us an image that describes this very well. It is called the “Nürnberger Trichter” ([The Nuremberg Funnel](#)). The image has different variations but usually shows a student with a funnel in his head and a teacher who fills it with knowledge. This indicates that even the “stupidest” student can know things if you just dump a lot into their head. Which is not very sustainable and transports biases because knowledge is not just facts (Laura Hilliger). Knowledge is influenced by experience, sometimes perception and also emotion.

In the following email we will talk more about the role of experience and emotion in a feminist classroom.

Deep Dive

[I'm every woman](#) A funny and sarcastic comic book about the women and wives behind influential and famous men like Einstein, Elvis Presley and more (not available in English but many other languages)

[Invisible Women: Data Bias in a World Designed for Men](#) A great book that sheds light on the everyday life of women and what obstacles they have to face because of research and data that is solely based on men.

3 The role of experience and emotion

Email subject: [3 FIFE]  Habits of the Head: The role of experience and emotion

Welcome back [Subscriber],

In the last email we learned about the underlying theories of knowledge and how social construction of knowledge is much more sustainable. One can't just fill knowledge into a learner's head with a funnel because knowledge is not just facts. Knowledge is also perception, experience and emotion in combination with facts.

If you've had this email forwarded to you from a friend or colleague, you can sign up for yourself [here](#).

In a feminist classroom, we aspire to bring the whole identity of a person (students as well as teachers). This can help us to break down the divide between “classroom vs. real world”. We have to acknowledge that personal experience or emotions differ and that they are valid and valued. They are a form of knowledge that we can use to expand other people's knowledge if we encourage sharing them.

Tools & Approaches for check-ins in workshops or classrooms

- [Moodlight](#) is a pretty approach to check what mood is in the room. Everyone can choose a mood and the app generates a colourful overview of the different emotions.
- [Gefühlsmonster](#) (emotion monsters) is a cute card collection with images of monsters that show different emotions in different settings. They are a great way to ask about emotions in a nonverbal way. (not open source)

Other Sources

- [Check-ins and Check-outs](#) are a great way to ask everyone to come to meetings as their whole self and share the things with the group that they want to share. [Targeted questions](#) can help with that.
- The [Big Reveal](#) is a simple approach to ask anonymously for people's opinions, emotions or experiences in an online environment.

Earn your first badge

We want to recognise people who take the time to learn about Feminist Pedagogy, so we offer several badges that you can earn. [Open Badges](#) allow us to offer an alternative to learning and credentialing as we know it. We will go into more detail about Open Badges, Open Recognition and the connection with feminist pedagogy in the next email, when we talk about the “Complexity of Identity”.

To receive your first badge please answer a few questions to help us understand your motivation and background for participating in this course. [Go to TypeForm](#)

After answering the questions and submitting them you can claim “The Habits of Head Badge” for this activity [over here](#).

Deep Dive

The paper [Love and Knowledge: Emotion in Feminist Epistemology](#) by Alison M. Jaggar that has been cited in the [Guide for Feminist Pedagogy](#)

4 Habits of heart

Email subject: [4 FIFE] 💖 Habits of heart

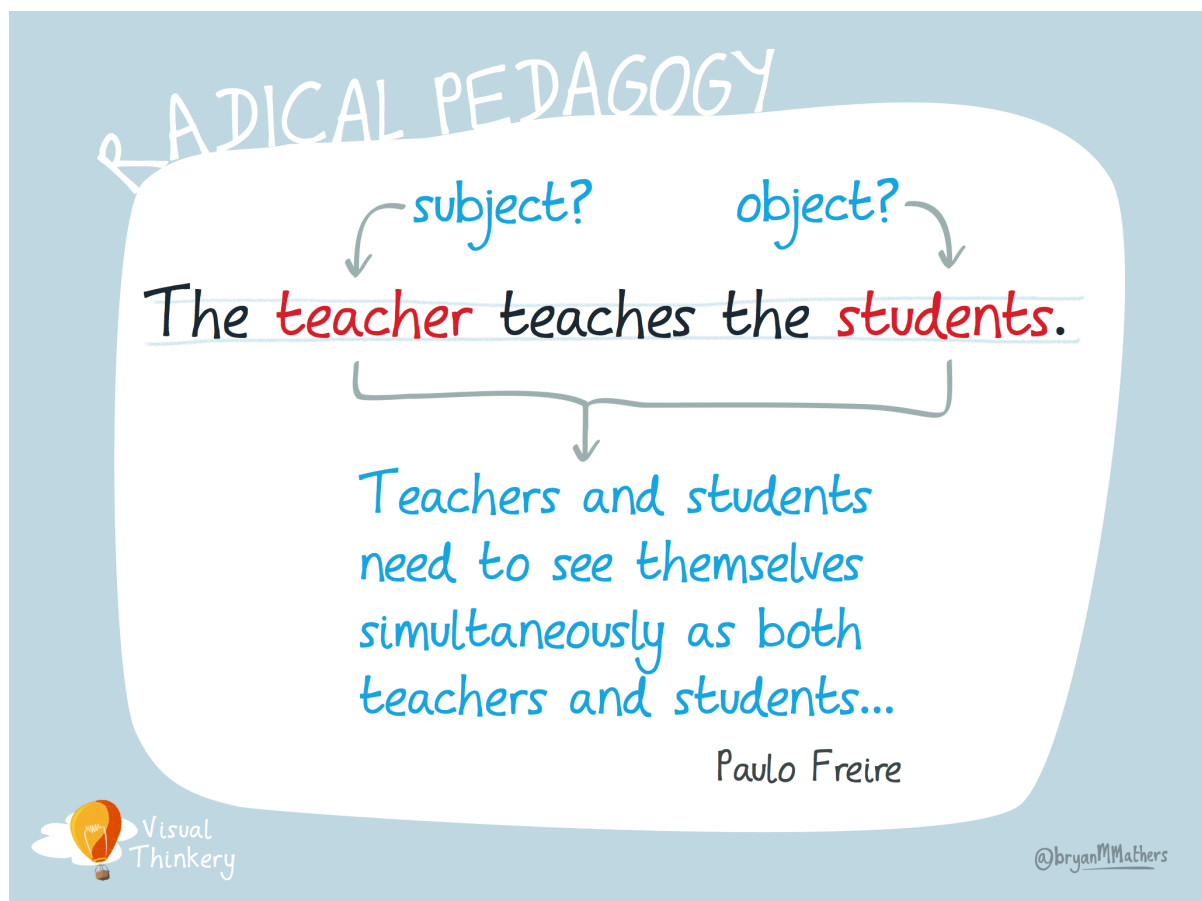

Hi there [Subscriber],

In the last email we talked about the role of experience and emotion that have a grand influence if we want to break down the divide between “the real world and the classroom”. Today we are going to talk about power and authority because different experiences with power and authorities also influence a student's knowledge construction.

If you've had this email forwarded to you from a friend or colleague, you can sign up for yourself [here](#).

The role of power and authority

Power and Authority is one of the main topics in feminist discussions. If we want to create inclusive and equitable spaces we have to reflect carefully on current power structures within the systems of which we are part.

If we want to achieve an inclusive and equitable classroom we have to compel ourselves to **ask the following questions:**

- Who has power?
- How is power deployed and to what end?
- How does power influence the teaching and learning processes?

If you remember the learning situations in your life and ask yourself these questions. How would you answer them?

Another important aspect to acknowledge is that a learning environment is a space historically rooted within systems of power. Educators have to be aware that it is easy to (ab)use their authority to take over the classroom. This means **we as educators have to constantly reflect on our behaviours** and remind ourselves that we aren't rulers. As soon as we abuse our authority to establish power structures some people will fall behind and be excluded.

Instead we need to make sure that the learners feel empowered to reflect their position in- and outside the classroom and consider themselves as knowledge holders. The idea, described by bell hooks, is that there is a productive use of power and that the power's effects depend on who has it and their intentions.

Evaluate yourself

A very good example that I've experienced once was during a semester abroad in Finland.

I attended a class called "[Feminist Food Studies](#)". The whole course was based on the concept of feminist pedagogy. At the end of it the teachers asked us to evaluate ourselves and to submit our grade to them. This was a great way to make us feel our power. They stepped back and left us a space that we've never experienced before in a formal education setting. Usually a student submits a paper or other piece of work and receives a grade

without any feedback. By learning to evaluate yourself and suggest a grade to the teachers we can learn to look at our own work and see its value.

Not so fun fun fact: [Research](#) found that women tend to grade and evaluate themselves worse than their actual performance, which is one of the many reasons for the gender (pay) gap.

The complexity of identity

WΔO

As a feminist educator it is crucial to **acknowledge the nuances between identities**. These nuances establish differences between and among the students, between the teachers and their students and also between the class and the authors of learning content. Educators who work as feminist pedagogues should always address identities and voices that get erased, silenced, absent, or otherwise excluded. It is important to reflect on the complexity of identities and how that complexity influences behaviour.

Open Badges recognise identities

Open Badges can be a tool to help recognize differences in identities because if we talk about Open Badges we also talk about Open Recognition:

“Open Recognition is the awareness and appreciation of talents, skills and aspirations in ways that go beyond credentialing. This includes recognising the rights of individuals, communities, and territories to apply their own labels and definitions. Their frameworks may be emergent and/or implicit.” ([Doug Belshaw](#))

Open Recognition is based on the concept of lifelong learning as well as access to knowledge and education for everyone despite their backgrounds. This is why I want to

connect Open Badges with feminist pedagogy because I believe they are a valuable tool for creating equity.

For example, **co-creating the Badges** with learners is a great way to acknowledge differences and value them. Some learners might have moved from one place to another and experienced a language or culture difference. Others might be first generation university students. There are many ways that learners are different. Badges can help the learners to reflect on their personal goals, see what their strengths are and also learn that one's own weaknesses can be turned into a strength, skill or accomplishment if there is an intrinsic motivation.

Deep Dive

[Badge Wiki](#) is a knowledge repository for the Open Badges community. It is stewarded by We Are Open Coop. If you want to learn more about Open Badges this is the place to go.

[Open Recognition is for every type of learning](#) is a blogpost by Doug Belshaw that explores the distinction between credentialing and recognition.

[Keep Badges Weird](#) is not only the name of a Community that WAO is involved with but also a [podcast episode](#) where Laura and Doug talk about recognising learning and pro-social behaviours with badges.

5 Importance of community

Email subject: [5 FIFE] 🧡 Habits of heart: The importance of community

Welcome back [Subscriber],

So far we've talked about the Habits of Head that include the theories and philosophies of knowledge construction and the habits of heart that look at the roles of power and authority in a learning environment as well as the complexity of identity. At the heart of feminist pedagogy is the building of communities. This is what we are going to talk about today.

If you've had this email forwarded to you from a friend or colleague, you can sign up for yourself **here**.

Community building is crucial for a learning environment that is based on feminist pedagogy. Feminism speaks about how the patriarchy has socialized women and other marginalized groups to fear one another, and to believe they are “valueless and obtain value only by relating to or bonding with men” (hooks 1984, p.43). A community is as a powerful tool to help feminism achieve its goals because we are able to create a space that is inclusive and where we can learn from each other.

Learning within a community is a sustainable way to help people to learn from each other and work towards common

COMMUNITY

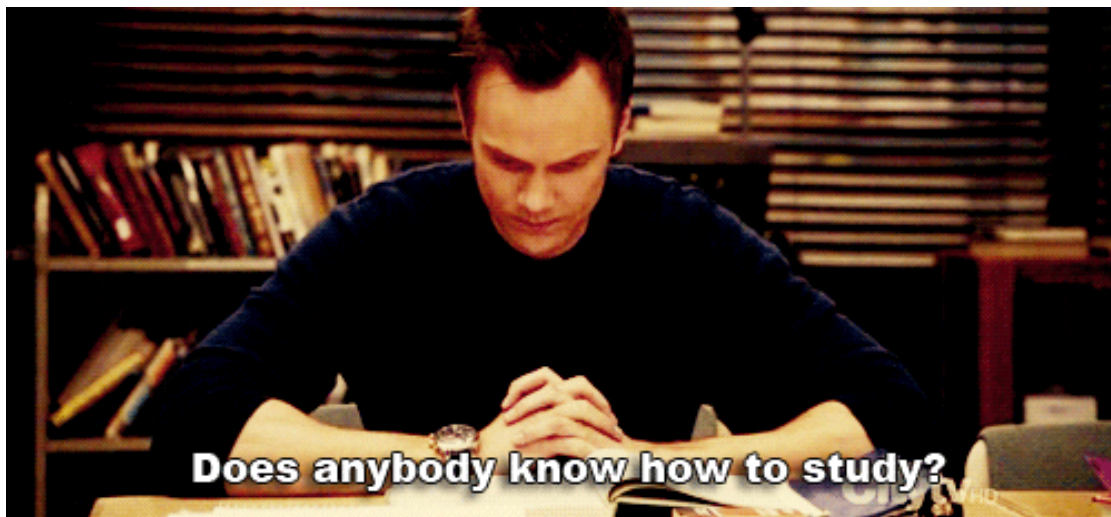

goals. It also helps to reduce hierarchies and power structures in the classroom because more people have the chance to bring their ideas to the table.

Communities of Practice

A very good example for a non-hierarchical social learning approach are [Communities of Practice](#) (CoP). With the help of CoPs people who share an interest in a certain topic can come together, share their knowledge and learn from each other. This approach provides low to no hierarchies and participants of the community are equal and support each other.

They can exist in physical settings, for example, a lunchroom at work or universities, a field setting, a factory floor, or elsewhere in the environment, but members of CoPs do not have to be at the same location. Online environments are also a perfect base to build a CoP. ([Wikipedia](#))

Resources for Community building

[Resources for using Communities of Practice in your social learning approach](#) on Participate is a great 101 overview on CoPs. We Are Open is hosting the [Keep Badges Weird Community](#) on the Participate platform and collaborating with people from around the world of open recognition.

[The Community Canvas](#) is a great tool to start designing your CoP and figure out the needs of it.

Earn your second badge

We built a [collaborative Padlet board](#) and invite you to share your knowledge, ideas and resources around feminist pedagogy. You can add your own ideas, comment or just read what others have to say. We intend to slowly build a CoP with those of you who are especially interested in this work.

[Submit your evidence](#) and claim the Habits of Heart Badge!

Deep Dive

[“What we talk about when we talk about open”](#) course is another free email course by WAO that helps you to understand the basics of open working.

Tao of WAO S2E04 [“Creativity and Movement Building”](#) Laura and Doug talk to Kudzayi Ngwerume about her experience building movements and connecting people through creativity and passion.

6 Habits of hand

Email subject: [6 FIFE] 🖐️ The habits of hand

Hi there [Subscriber],

We've made it pretty far through the course already which means that we will now bring together the **habits of heart** and **habits of head** into our practice – the **habits of hand**. You might recall that we've talked about the Signature Pedagogies by Lee S. Shulman in the first email.

The habits of head that are our ways of thinking and knowing,

The habits of heart that are the values that guide us, and

The habits of hand that are our practices, that are informed by our habits of head and heart.

To talk about the Habits of Hand we should start by asking:

What do we do? How do we act on our beliefs and values?

Education is not preparation for Life

Education = Life

@bryanMMathers

THOUGHT: JOHN DEWEY

We've looked at the roots in philosophy, talked about the construction of knowledge and why socially produced knowledge is much more sustainable. It gives us the chance to have a diverse and equal knowledge base that we can all work with. Through social construction and engagement we have so much more influence on the content and the opportunity to listen to voices we haven't considered or heard before. This means that a classroom should

not be one-sided and teachers can also learn from their students and co-construct the knowledge.

In feminist pedagogy the habits of hand can take many different forms. The thing those forms have in common is that they are influenced by the habits of head and heart that we've been talking about.

Habits of the hand are tools that help us remember the diverse experiences and emotions in our classrooms. They provide frameworks to help educators and students bring their whole selves to their learning environments.

Policies for equity

- Social contracts
- Making collaboration easy for everyone
- Consent based decision making

Implementing such policies are steps toward dismantling hierarchies and preventing power abuse. If people understand that they are not just an empty, passive vessel that gets filled with knowledge you give them the power to shape their own world and help them understand that they have self efficacy. You give them the tools to feel their own agency and voice.

For the last bit of this course we will therefore have a look at the things we have to consider when we design courses and learning environments.

Deep Dive

[The Femedtech Quilt of Care and Justice in Open Education](#) is the preparation and assembly of a quilt that links social justice and open education technology contexts and the creation of a digital archive of the elements.

7 Design

Email subject: [7 FIFE] 📝 Habits of hand: Design a feminist classroom

Hello [Subscriber],

If you’ve had this email forwarded to you from a friend or colleague, you can sign up for yourself **here**.

“Feminist education—the feminist classroom—is and should be a place where there is a sense of struggle, where there is visible acknowledgment of the union of theory and practice, where we work together as teachers and students to overcome the estrangement and alienation that have become so much the norm in the contemporary university.” — bell hooks

Course Design

WAO

'Backwards design' of a course or learning content is a good way to design something that is learning-centred. This means it is better to define the **results** of the content first and *then* think of the methods and activities. For Wiggins and McTighe the key questions to get to the heart of effective learning are:

- What is important here?
- What is the point?
- How will this experience enable me as a learner to meet my obligations?

From a Feminist perspective, these questions serve to center the Habits of the Head, Heart and Hand so that we can ensure an inclusive and equitable learning design. We at WAO always ask ourselves the 5 W's (and 1 H) questions when we design learning content. This helps us to think about the different needs and backgrounds of participants and shape the course content and methods for them.

You might recognise this catchy tune from Richard Scarry's *Busytown Mysteries*. If you've never seen it before, or you need a reminder, take 30 seconds to watch this, and you will never forget any of these questions ever again!

[Click here](#) if you can't see the image above!

- **Who?** - Who is joining us? What is their background?
- **What?** - What are we trying to teach to the participants? What is the goal of this?
- **When?** - When are we doing it?
- **Where?** - Where are we doing it? What is the setting?
- **Why?** - Why are we doing this course?
- **How?** - How are we doing it? What are our methods to reach our goals?

Learning Environments and Contested Spaces

We've already covered a lot of important things to think about in a feminist learning environment. Community building, individuals' needs because of different backgrounds and rethinking of hierarchies and power structures are all very important.

For us there is one last thing left we want to talk about and that is a critique of the term "safe space" in the context of a classroom. That safe spaces are important is beyond doubt; marginalised people need safe spaces to escape and be around one another without fear of harm. However, within a feminist classroom this ideal of "safety" has been critiqued as paradoxically counterintuitive to the goals of feminist pedagogy. Because whose safety are we talking about? If we start talking about privilege it might feel threatening to participants who benefit from that privilege and maybe a dialogue regarding sexual and racial differences risk discomfort in others.

This means that we should be focused on generating a *dialogue*. We must be open to tension and disagreement rather than constructing a safe, conflict-free zone. Ludlow calls this a “contested space”. Because an “atmosphere of risk” challenges the learners to rethink their privileges and invites them to change perspectives. **Social inequalities are not risk-free to those who are subject to them.**

It can be uncomfortable to be in the vanguard of a new mode of thinking and acting, but that’s OK! We hope that you take on this challenge and understand how important it is to have leaders like you in this space.

Earn your third badge

Earn the Habits of the Hand badge by openly sharing or remixing this course. Just as we have done with the [Vanderbilt Center for Teaching](#) course which we cite in the footer, you could take this course and build on it for your purposes.

Alternatively, or in addition, you could reflect on how this course has influenced you or your practice. Do this on your blog, social media, or somewhere else! Feel free, feel open and share!

[Claim your badge](#)

Deep Dive

- [This Tao of WAO episode](#) discusses learning design and participatory methodologies, as well as the emotional aspects of being an educator.
- Social learning and communities of practice are learning environments that can change systems. [This post explains](#) how through a case study for the Keep Badges Weird community.

- [Rethinking safe spaces through intentional community building](#). Mofi Badmos, Diversity and Inclusivity Coordinator at the Smith School of Business, talks about the importance of community and how creating spaces for BIPOC (Black, Indigenous, People of Colour) individuals is key to fostering belonging.

8 Conclusion & Goodbye

Email subject: [8 FIFE] 🖐️ Conclusion and thanks for taking the course

Welcome [Subscriber] to this last email,

Thanks for joining us for this introductory Feminist Pedagogy course from [We Are Open Co-op](#)! We've covered a **bunch** of things over the last couple of weeks, so you might want to revisit previous emails to recap just *some* of the following:

- How is knowledge constructed
- The role of power and authority in and outside the classroom
- Open Badges as a form of a feminist classroom practice
- Why communities are important
- What is important when designing a course or learning environment

And now lets get to work and make learning environments more feminist!

Receive your Badge for completing the course

Thank you for choosing to learn that *Feminism is for Everyone, especially Educators!* We hope you've enjoyed this course. If you have, would you share this course with others who might benefit from it? Just send them to the following link for them to be able to sign up for themselves: <https://learnwith.weareopen.coop/courses/fife/>

[Finally, CONGRATULATIONS! Go and claim your FIFE Finisher badge!](#) 🎉🎉🎉

Have feedback for us? Let us know!

Course Landing Page Content

Feminism Is For Everybody, Especially Educators! [FIFE]

We Are Open Co-op is proud to present another free email-based course to help you become introduced to the philosophy of feminist pedagogy. This course is written for leaders and educators who want to integrate more feminist practice into their learning environments.

This course is based on "[A Guide to Feminist Pedagogy](#)" by the [Vanderbilt Center for Teaching](#) and covers:

1. Habits of the Head - the philosophy and pedagogies that lead to feminist spaces.
2. Habits of the Heart - the role of power and authority, the complexity of identity and the importance of community in this intentional practice.
3. Habits of the Hand - an introduction into how bringing together the habits of the head and the habits of the heart can lead to more equitable learning environments.

FIFE Open badges

Through the course you can earn up to four Badges by taking part in specific activities and receiving all the emails. The first three Badges are optional and the fourth one is for completing the course.

Habits of the Head badge

We've created a TypeForm questionnaire to get to know participants better and to understand where you are coming from. This will help us improve this course and filling it out can also help you earn a badge!

Habits of the Heart badge

We built a [collaborative Padlet board](#) and invite you to share your knowledge, ideas and resources around feminist pedagogy. You can add your own ideas, comment or just read what others have to say. We intend to slowly build a CoP with those of you who are especially interested in this work.

After submitting something to the board you can claim your second badge, the Habits of Heart badge.

Habits of the Hand badge

Earn the Habits of the Hand badge by sharing or remixing this course, or by reflecting on how it has influenced you or your practice.

FIFE Finisher badge

When you've completed the entire Feminism is for Everybody [FIFE] course, you can earn the FIFE Finisher badge.

Signing up for this course and/or earning badges means that you're cool with our [privacy policy](#).

Type Form

- What drew you to this course?
- How do you see gender roles playing out in your life?
- How do you intend to integrate feminist practices in your work?
