

Open Innovation in Practice

Being Agile

**What did it used to
be like?**

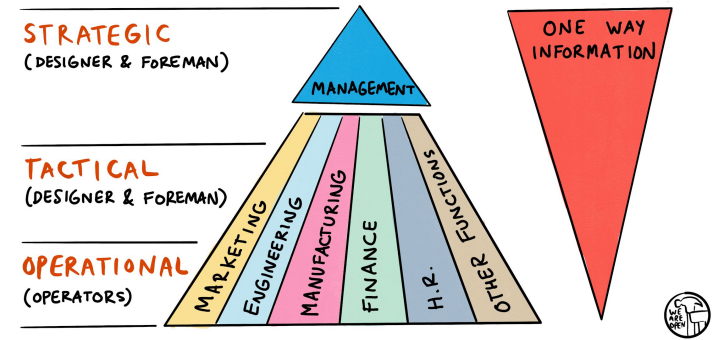

How it used to be

Since the late 1800's we have organised for efficiency which included standardisation, one-way flow of information, and planning for how the team will work to solve problems.

It required coordination of people and only using a fraction of their capabilities.

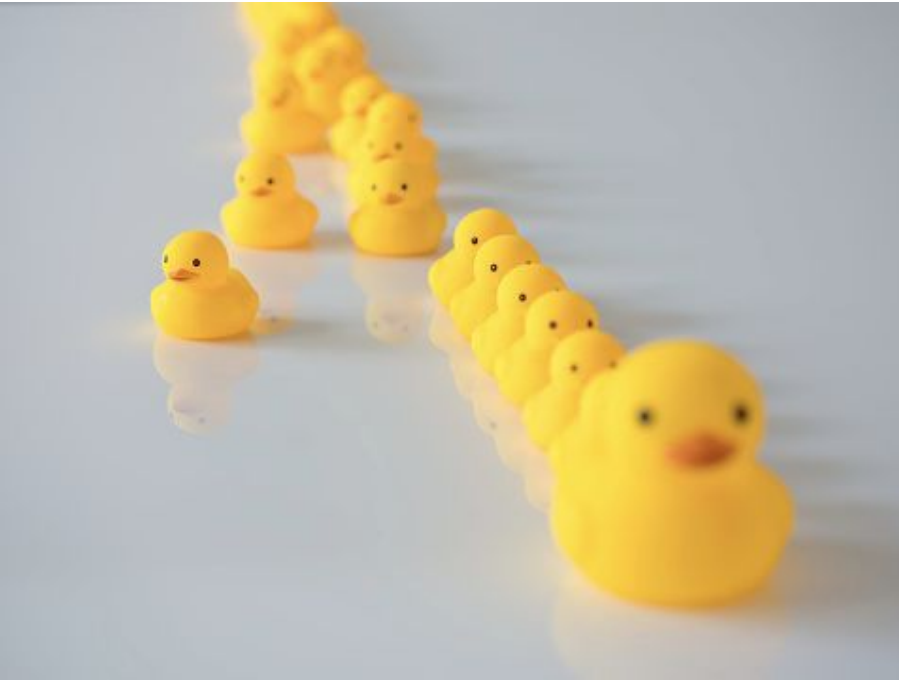

These models made the human the machine managed by command and control. Once these methods lost their effectiveness in the late 1900's we began to see a disengaged and disempowered workforce.

TAYLORISM MANAGEMENT STRUCTURE

Taylorism by We Are Open

Organisations don't need to get their ducks in a row...

Organisations need self organising ducks.

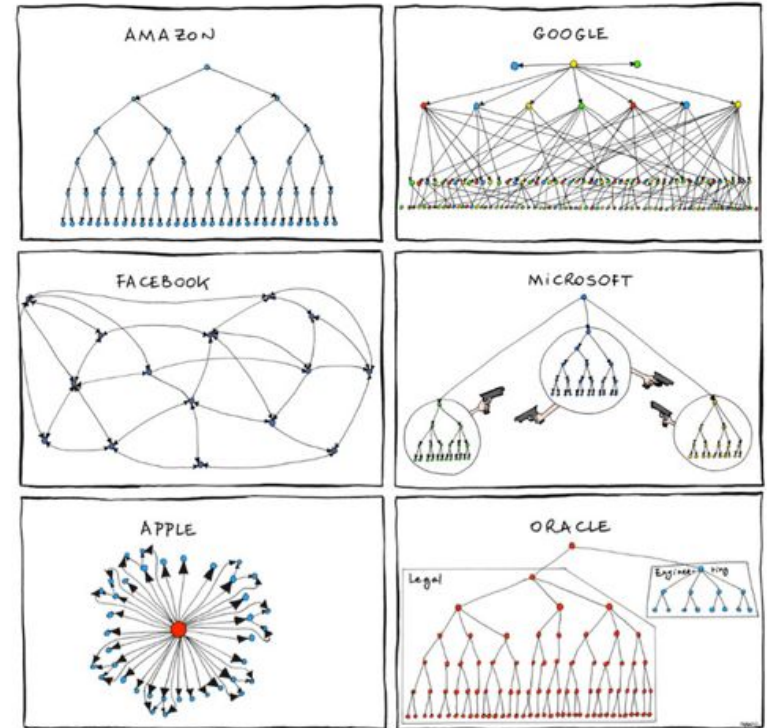

Organisation as Chaordic Systems

Chaordic System

A 'chaordic' system is:

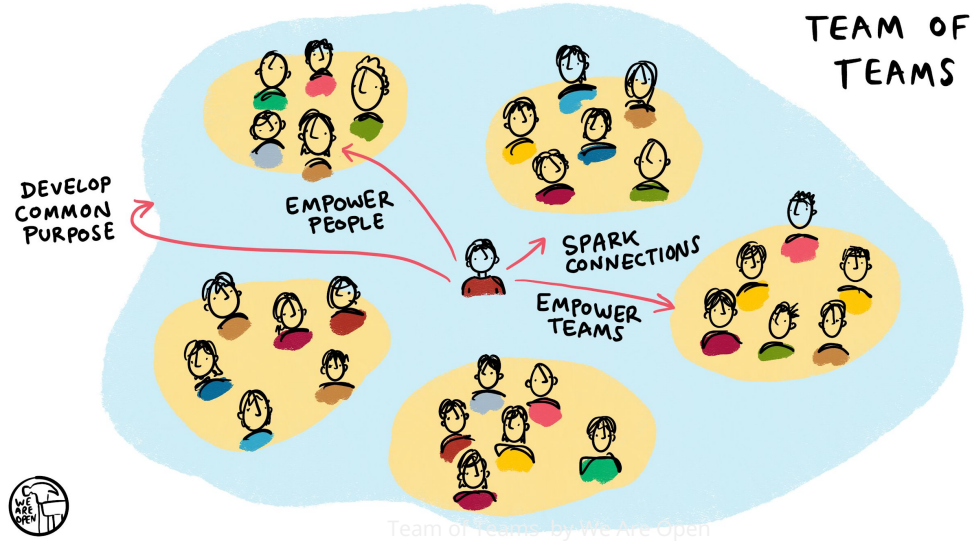

any self-organizing, adaptive, nonlinear complex system, whether physical, biological or social, the behavior of which exhibits characteristics of both order and chaos.

(Dee W. Hock)

That's good, we can use it to

- Organise for adaptability + resiliency
- Distribute leadership + decision making
- Share a flow of information
- Collaborate with the work + people
- Unleash capabilities + talents of people
- Spark innovation with open principles

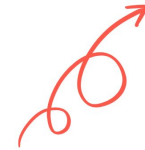

What are the benefits of open?

Greater agility, as members are more capable of working toward goals in unison and with shared vision;

Faster innovation, as ideas from both inside and outside the organization receive more equitable consideration and rapid experimentation, and;

Increased engagement, as members clearly see connections between their particular activities and an organization's overarching values, mission, and spirit.

Characteristics of an agile project

1. **Individuals and interactions** over processes and tools
2. **Working software** over comprehensive documentation
3. **Customer collaboration** over contract negotiation
4. **Responding to change** over following a plan

- 2 WORKING SOFTWARE
(OVER COMPREHENSIVE DOCUMENTATION)
- 3 RESPONDING TO CHANGE
(OVER FOLLOWING A PLAN)
- 4 CUSTOMER COLLABORATION
(OVER CONTRACT NEGOTIATION)

Agile + Open?

Open approaches are particularly focused on **transparency and inclusivity**, which are not necessarily features of agile approaches.

However, the two are complementary, and so using agile approaches in open projects can work well.

- Transparency
- Inclusivity

Practicalities

Things that may help your project from agile approaches:

AGILE

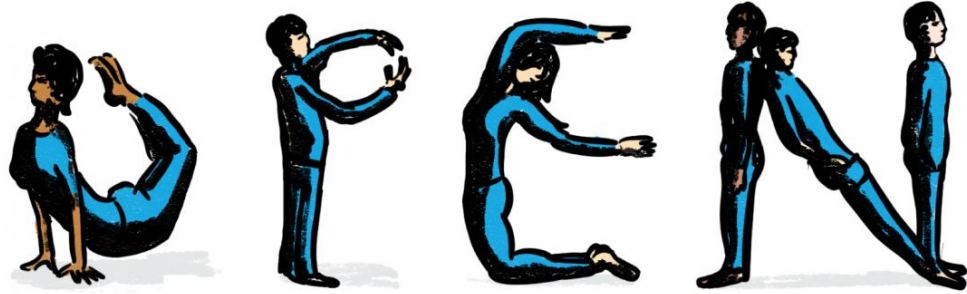

- Regular check-in calls, (sometimes called 'stand-ups')
- User stories
- Iterative development
- Retrospectives
- Timeboxing

OPEN

- Transparent decision-making
- Public and explicit goals
- Welcome diverse contribution
- Provide accessible feedback mechanisms
- Statement on core values
