**What did it used to
be like?**

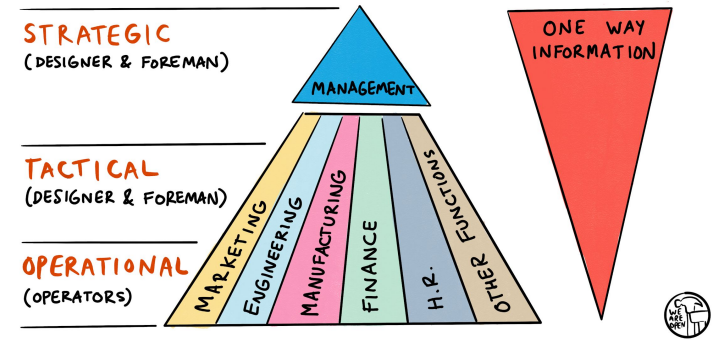

How it used to be

Since the late 1800's we have organised for efficiency which included standardisation, one-way flow of information, and planning for how the team will work to solve problems.

It required coordination of people and only using a fraction of their capabilities.

These models made the human the machine managed by command and control. Once these methods lost their effectiveness in the late 1900's we began to see a disengaged and disempowered workforce.

A better way

- Organising for adaptability + resiliency
- Distributing leadership + decision making
- Shared flow of information
- Collaboration with the work + people
- Unleashing capabilities + talents of people
- Open principles to spark innovation

2. Agile methodologies
3. Practicalities

Objectives

An overview of the similarities and differences between agile and open methodologies.

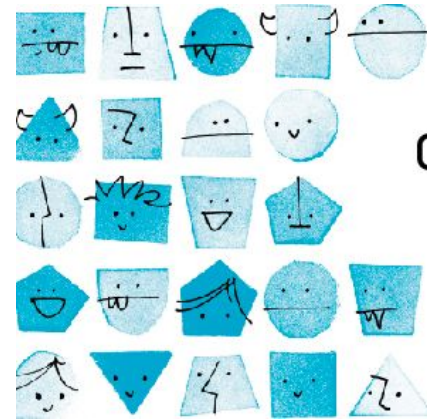

What are the benefits of open?

Greater agility, as members are more capable of working toward goals in unison and with shared vision;

Faster innovation, as ideas from both inside and outside the organization receive more equitable consideration and rapid experimentation, and;

Increased engagement, as members clearly see connections between their particular activities and an organization's overarching values, mission, and spirit.

Characteristics of an open organization

(and an open project!)

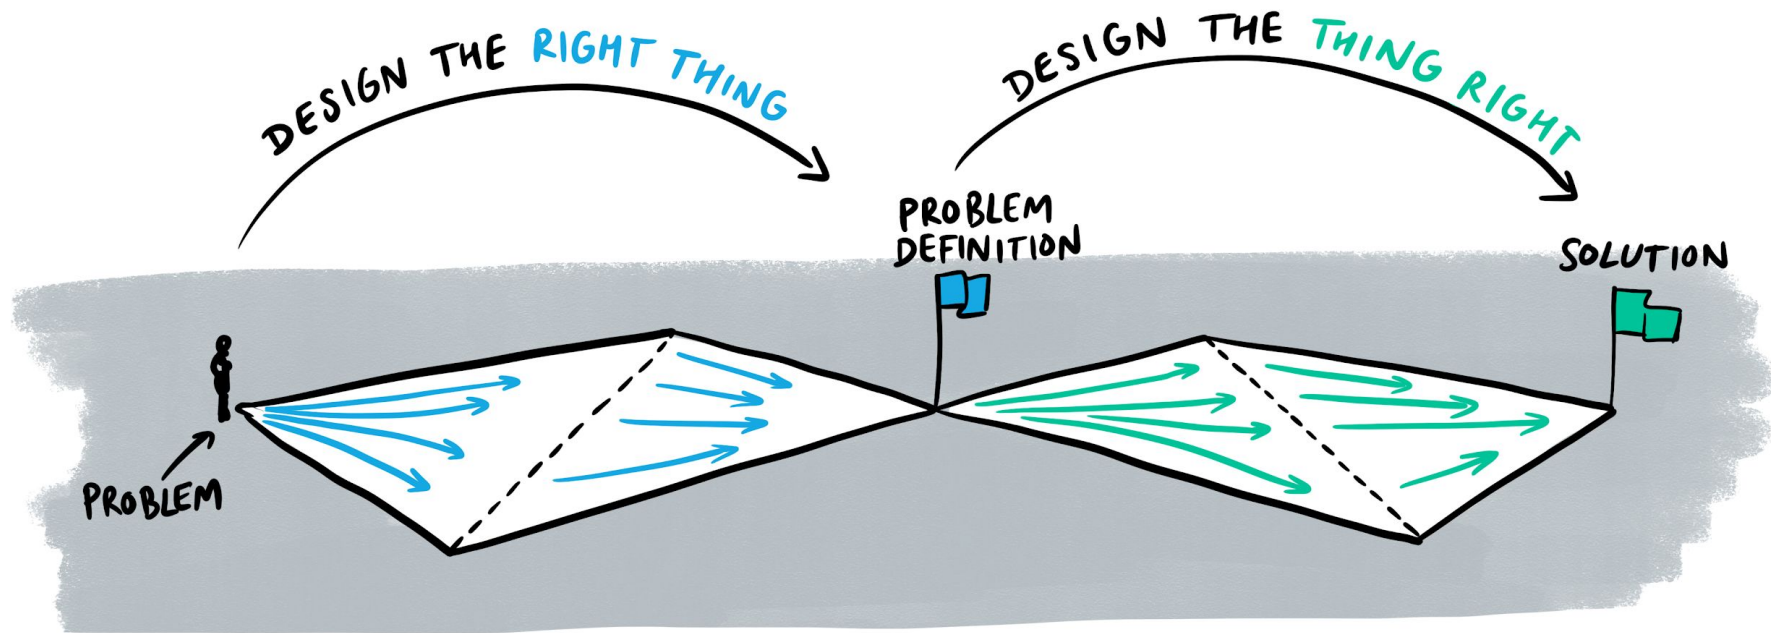

- Transparency
- Inclusivity
- Adaptability
- Collaboration
- Community

Characteristics of an agile project

1. **Individuals and interactions** over processes and tools
2. **Working software** over comprehensive documentation
3. **Customer collaboration** over contract negotiation
4. **Responding to change** over following a plan

Agile + Open?

Open approaches are particularly focused on **transparency and inclusivity**, which are not necessarily features of agile approaches.

However, the two are complementary, and so using agile approaches in open projects can work well.

- Transparency
- Inclusivity

Practicalities

Things that may help your project from agile approaches:

AGILE

- Regular check-in calls,
(sometimes called 'stand-ups')
- User stories
- Iterative development
- Retrospectives
- Timeboxing

Q & A

Running an open project

So... you're going to run a project and you want to do so openly.

What do you need in place to make it a success?
