

we are open

Week 3: System Ecosystems

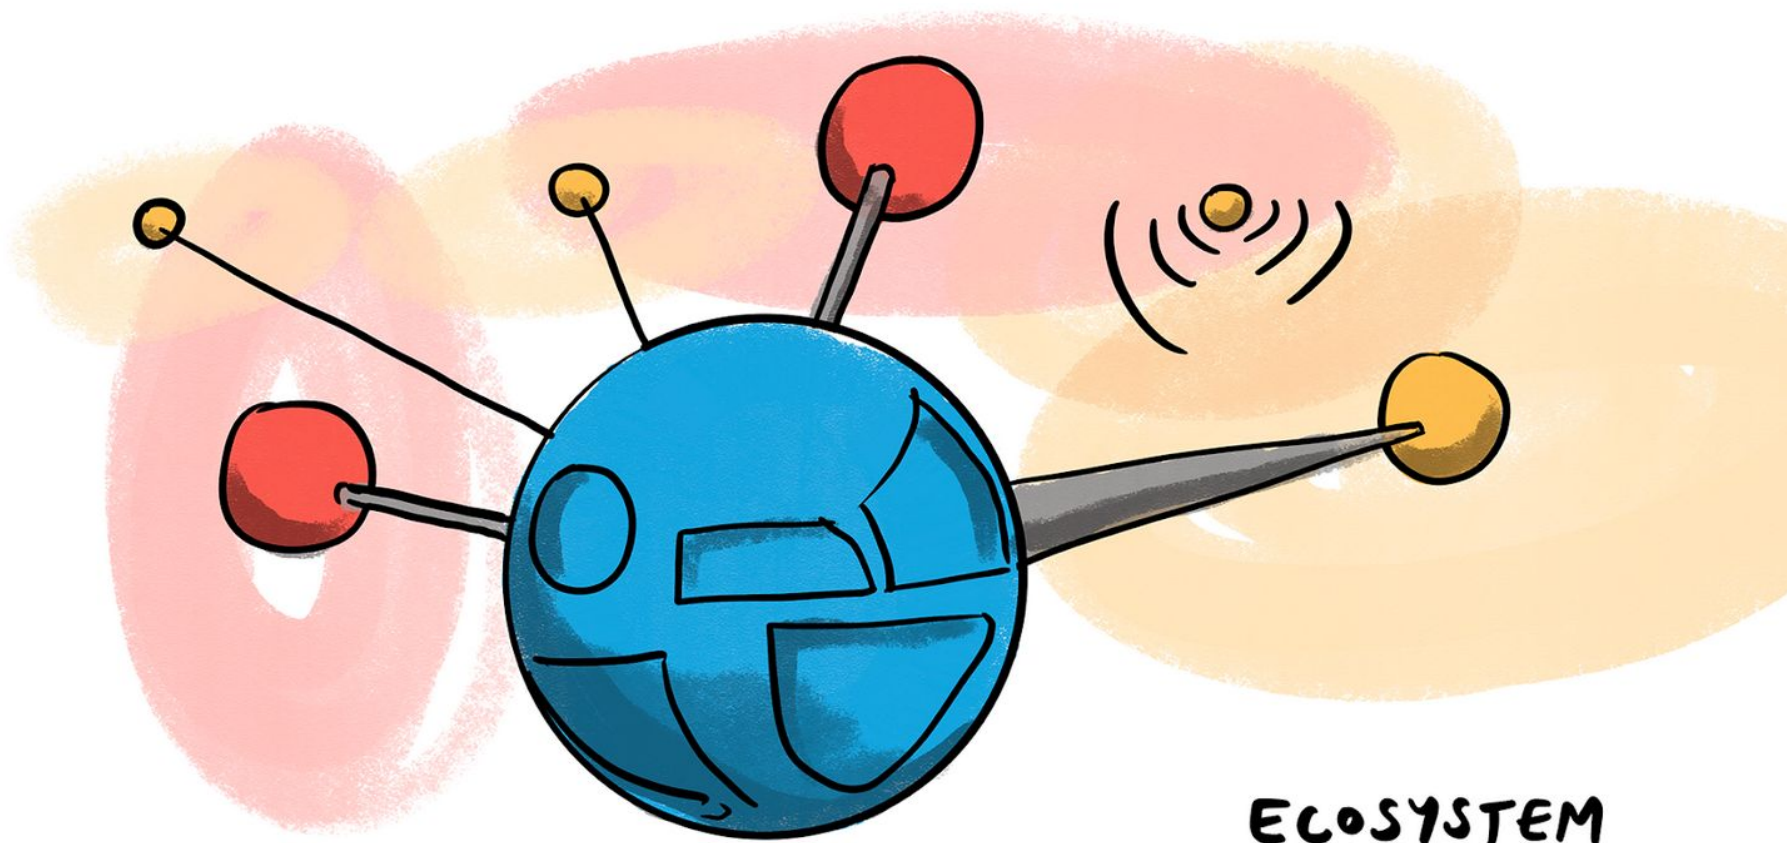

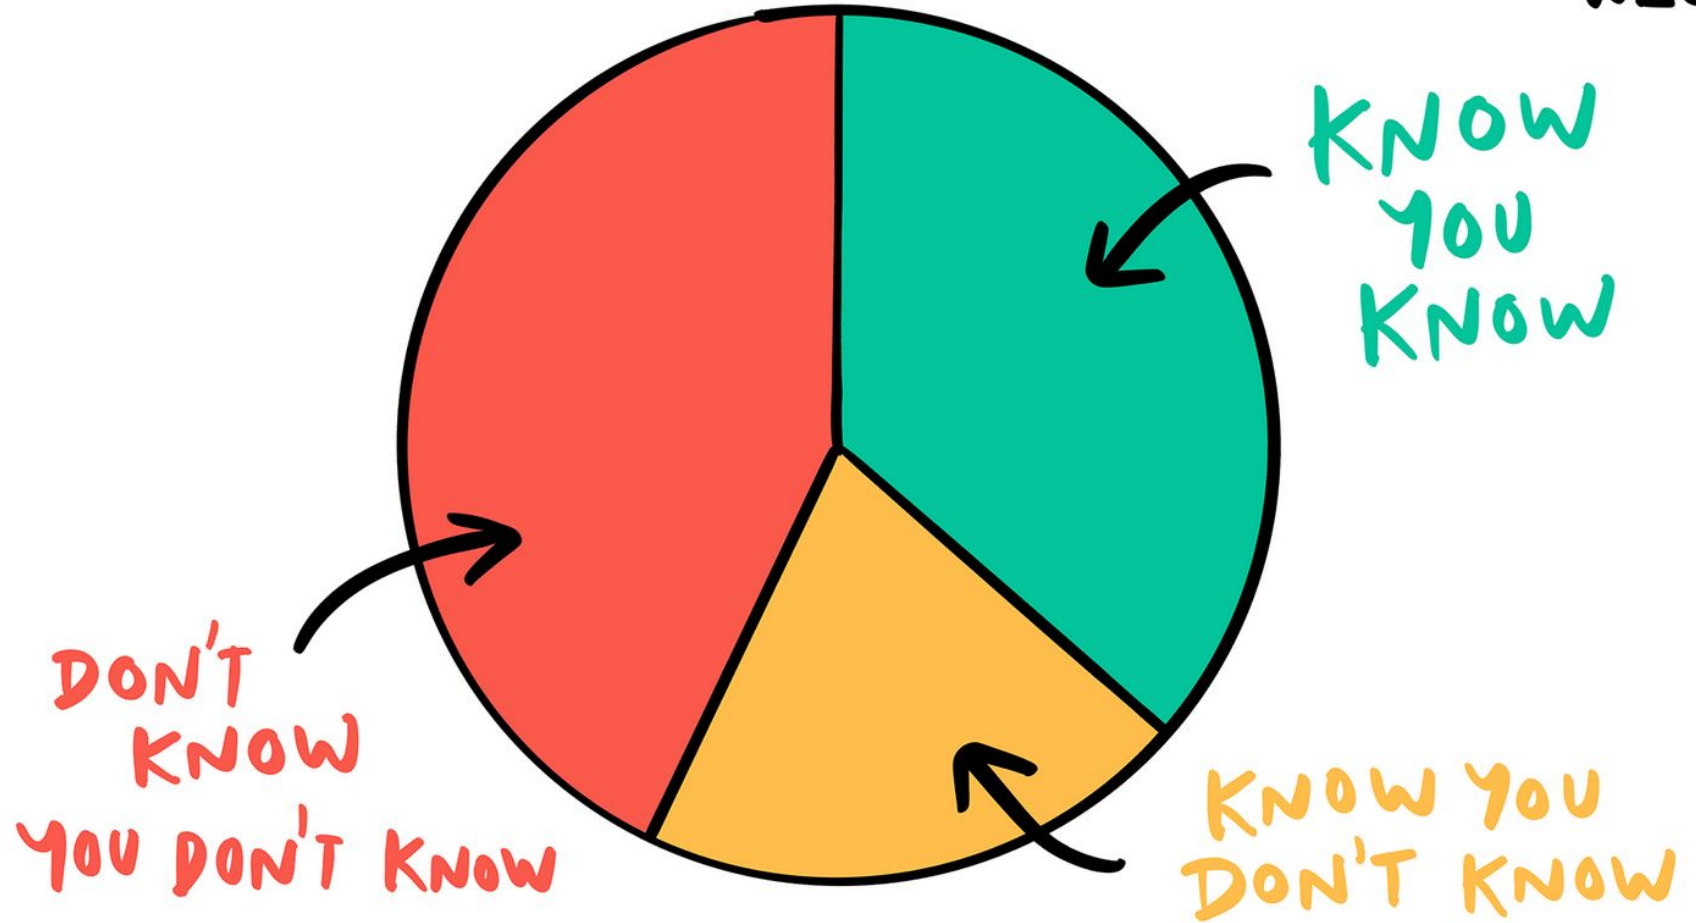

Ecosystem (n.) a
complex network or
interconnected system.

e.g. 'Silicon Valley's entrepreneurial ecosystem'

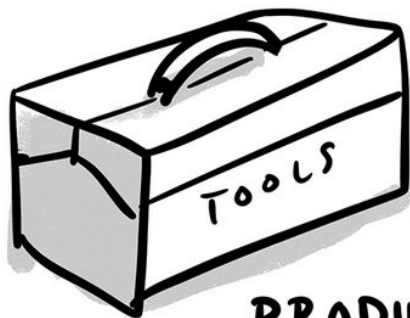

WAO

ECOSYSTEM

Persona spectrum mapping	Visionaries (know where they want to get to, but not how) 					
	NOW	FUTURE	NOW	FUTURE	NOW	FUTURE
Awareness	Word of mouth	Targeted outreach				
First Engagement	30-min call with one or more co-op members	30-min call with one co-op member				
Build Relationship	Mutual follows on social media	Subscribe to newsletter, complete relevant email course				
Deepen Engagement	Comment on social media posts	Free/paid webinars and workshops

SYSTEM
ECOSYSTEM

WAO

Complete Overview of Our System Ecosystem

Client facing

open collective

DigitalOcean

Production oriented

Internal org and comms

Client Facing System Pain Points

Client facing

Zoom pricing structure and multiple client accounts means that we have to regularly subscribe and unsubscribe as individuals to Zoom Pro.

DigitalOcean

Both Digital Ocean and Jekyll require high technical competency. We do not have a dedicated person to perform maintenance tasks.

Production Oriented System Pain Points

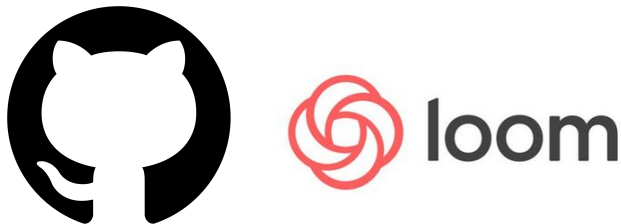

Production oriented

Posting at Medium means we are storing valuable content on an external platform.

Our etherpad install procedure is institutionalized knowledge in the head of one member. Server robustness can be an issue.

We do not have a single person who is responsible for ensuring the Wiki is up to date. We often forget to check policies that may already exists.

Internal System Pain Points

Internal org and comms

Toggl tooling is relatively new and we've not yet discovered the best way to use these tools

XERO use is institutionalized knowledge and not all members know how the financial processes or system works

Using the free version of Slack means we only have access to the most recent messages and cannot refer to messages from the past
